NETWORKING WITH NewLife4Drylands PROJECT

Desert Adapt just started a new exciting collaboration with the LIFE project NewLife4Drylands. NewLife4Drylands aims to provide, by using Remote Sensing techniques, a framework and a protocol for identifying sustainable solutions that could be successfully implemented in degraded lands and define mid- and long-term monitoring of interventions in desertified lands, to better evaluate restoration effectiveness and improve sustainable soil management.

Project Replication activity in Lampedusa (IT)

Desert-Adapt will replicate its activity with volunteering partners **“THE REPLICATORS”**. The project will provide a **REPLICATION TOOLKIT** and assistance to create your own desertification adaptation model (DAM) plan for your land. The replicators will become part of the Desert-Adapt Community.

This months we started in Italy, were UNIPA met the local cooperatives in Lampedusa to explain Project objectives and DAM framework.

We welcome all those interested to become replicators to contact our project.

BECOME A PROJECT REPLICATOR!
